

DAJCI ADVISORY

Jon Dajci

Speaker Pack

AI without the theatre. Technology without the jargon.

London. Available internationally.

BIOGRAPHIES

About Jon

SHORT BIO (for programmes and agendas)

Jon Dajci is the Founder of Dajci Advisory and an enterprise architect specialising in AI, technology strategy, cloud and security. His career spans engineering, financial services, enterprise transformation and large-scale Microsoft environments, including enterprise Copilot and agentic AI adoption.

MEDIUM BIO (for event pages)

Jon Dajci is an enterprise architect, technology advisor and Founder of Dajci Advisory.

His career has taken him from hands-on network and infrastructure engineering through cloud architecture, technology leadership, enterprise transformation and, most recently, enterprise generative and agentic AI.

Jon has worked across aviation, banking, wealth management, insurance and education, helping organisations simplify complex technology estates, strengthen security, challenge suppliers and turn emerging technology into practical enterprise capability.

He speaks about AI, architecture, enterprise technology and what actually happens when ambitious technology strategy meets the reality of a large organisation.

EVENT HOST INTRODUCTION (read aloud before Jon takes the stage)

"Jon Dajci is an enterprise architect and technology advisor whose career spans engineering, cloud, cyber security, technology leadership and enterprise AI. He's worked across banking, aviation, insurance and education and now leads Dajci Advisory, helping organisations make better decisions around AI, architecture and technology transformation. Please welcome Jon Dajci."

SPEAKING TOPICS

What Jon speaks about

Each topic can be delivered as a keynote, a working session or an executive briefing, and tailored to the audience.

Enterprise AI: What Happens After the Pilot?

Most organisations no longer need convincing that AI matters. The harder question is what happens when hundreds or thousands of employees begin creating AI agents, connecting enterprise data and automating business processes. A practical look at architecture, governance, identity, security, cost and ownership when enterprise AI begins to scale.

Your AI Agent Needs an Identity

Enterprise security has spent decades designing controls around human users and traditional applications. Agentic AI changes the model. A practical discussion of identity, least privilege, data access and the new control plane for enterprise AI.

AI Doesn't Fix Bad Architecture

AI can make an organisation faster. It can also make its existing architectural problems faster. This talk explores why fragmented data, weak identity, unclear ownership and years of platform sprawl become increasingly important as AI adoption grows.

Architecture That Helps People Make Decisions

Enterprise architecture has a reputation for producing diagrams, frameworks and governance. Its real job is much simpler. Help the organisation make better decisions. A practical discussion about simplifying architecture, improving Design Authority and turning technical complexity into executive choices.

The Hidden Cost of Technology Complexity

Businesses rarely decide to create a complicated technology estate. It happens one platform, supplier, transformation and exception at a time. This session looks at how complexity accumulates, what it costs and why simplification should become a measurable part of technology strategy.

What Vendors Don't Put on the Slide

Every platform looks simple during the sales presentation. Then come identity, integration, data, migration, security, licensing, operating models and support. A practical look at how technology leaders can challenge vendor narratives without becoming anti-innovation.

FORMATS

How Jon can take part

Keynotes, conference talks, panels, executive roundtables, leadership sessions, podcasts, fireside conversations and technology briefings.

LOCATION AND TRAVEL

Jon is based in London, United Kingdom, and is available for events across the UK and internationally. Travel requirements can be discussed per engagement.

HEADSHOTS

Portrait and landscape headshots are included alongside this document and may be used for event promotion with credit to Dajci Advisory.
